

ENERGY STAR New Homes Program Overview

Overview

Questar Gas Company (Questar Gas) is now offering an ENERGY STAR® New Homes Program in the state of Utah. The program is available to residential builders in the Questar Gas Utah service territory and includes incentives for installing natural gas energy efficiency measures in newly constructed residences. A qualifying residence is a structure that has up to and including four separately metered residential dwelling units. Incentives under the program will be paid directly to a home builder or owner-builder (Builder) for ENERGY STAR whole house certification and/or installing specific energy efficient natural gas measures, including high efficiency natural gas space heating and water heating appliances.

The program is designed to leverage marketing and delivery directly to Utah home builders through Questar Gas Home Builder Marketing Representatives. Incentives will be available direct to Builders upon completion of program requirements.

To the extent practical, the program has been designed in a manner to take advantage of synergies and coordination with the current Rocky Mountain Power's ENERGY STAR home builder program, including aligning the ENERGY STAR certification requirements for Builders and Home Energy Rating Systems (HERS).

Questar Gas is also proposing to offer incentives for residential high efficiency appliances (clothes washers, gas dryers, tankless gas water heaters and gas furnaces) and home energy audits and weatherization measures for existing customers.

Incentives

Measure	Specification	QUESTAR GAS Incentive
High Efficiency Storage Water Heater	EF 0.63 or greater	\$50
Tankless Water Heater	EF 0.80 or greater	\$300
High-Efficiency Furnace	AFUE Rating of 90% or greater	\$300
ENERGY STAR Whole House Certification	HERS Index of 85 or lower	\$500
